Forklift Safety Quiz

Name: _____ **Location:** _____

Employee Number: _____ **Date:** _____

Read each question and select the correct answer by circling “True” or “False”

1. OSHA regulations require a forklift operator to be authorized and trained.
True
False
2. Load capacity, Lift height and Load stability are three hazards associated with the forklift itself.
True
False
3. A forklift’s load capacity can be found on the manufacturer’s data plate
True
False
4. Tilting forks back slightly adds to load stability and contributes to safe driving.
True
False
5. Lifting co-workers with the forks so they can access higher warehouse shelves is an acceptable use of the forklift.
True
False

6. If the load blocks your forward view, you should drive in reverse.
True
False
7. Ramps and inclines pose special hazards for forklifts. If the forklift is loaded, an operator should drive forward up the incline and in reverse down the incline.
True
False
8. When driving, the operator should be watchful for oil spots, wet spots, loose objects or holes.
True
False
9. Standing under the forks when raised is o.k. under certain circumstances.
True
False
10. The “Stability Triangle” defines the imaginary area within which a load will not tip or become unbalanced.
True
False

Once finished, give this quiz to your supervisor so it can be sent to Risk Management.
